

Technical Service Bulletin 9

Anchor Light Relocation

June 3, 1999

This bulletin affects all Epic Boats.

1999 MY Epic boats were built with the Removable Anchor Light Pole stored in the trunk. In an effort to maximize trunk storage space and to, at the same time, make the light more accessible, the Anchor Light storage location has been relocated to behind the top half of the port side coaming panel.

There is no campaign to modify existing boats with the old storage location still in use, however it can be done at customer request during the next scheduled service.
